SETTING UP PRINTER ROUTING

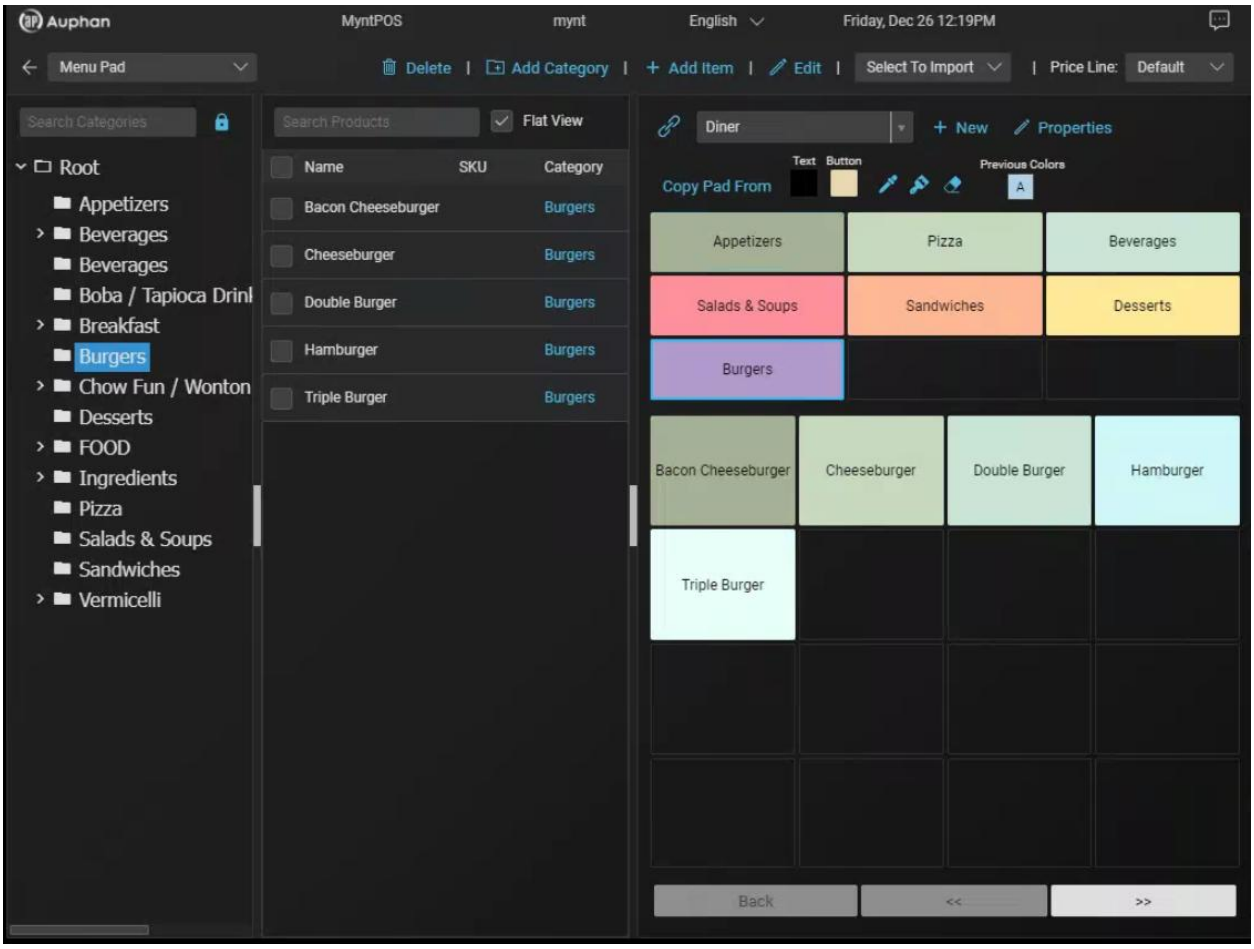

MYNT CORE & ENTERPRISE

This Is a step-by-step guide on how to set up printer routing in Mynt.

The printers are set up and configured by a Mynt tech. Once they are setup in the “Prep Printers/Screens” menu, they become available to attach items and categories to.

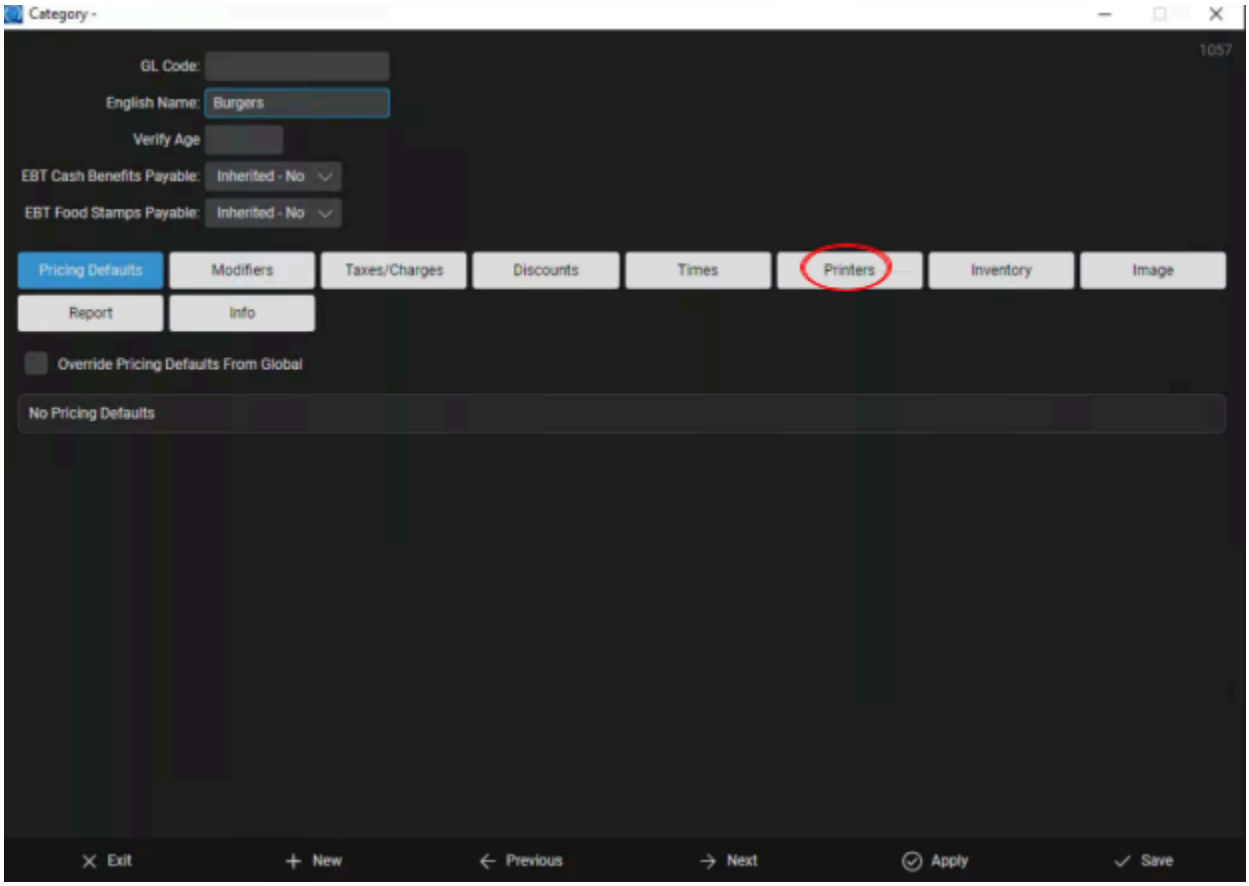

Navigate to “Menu” under “Menu Settings” in Management.

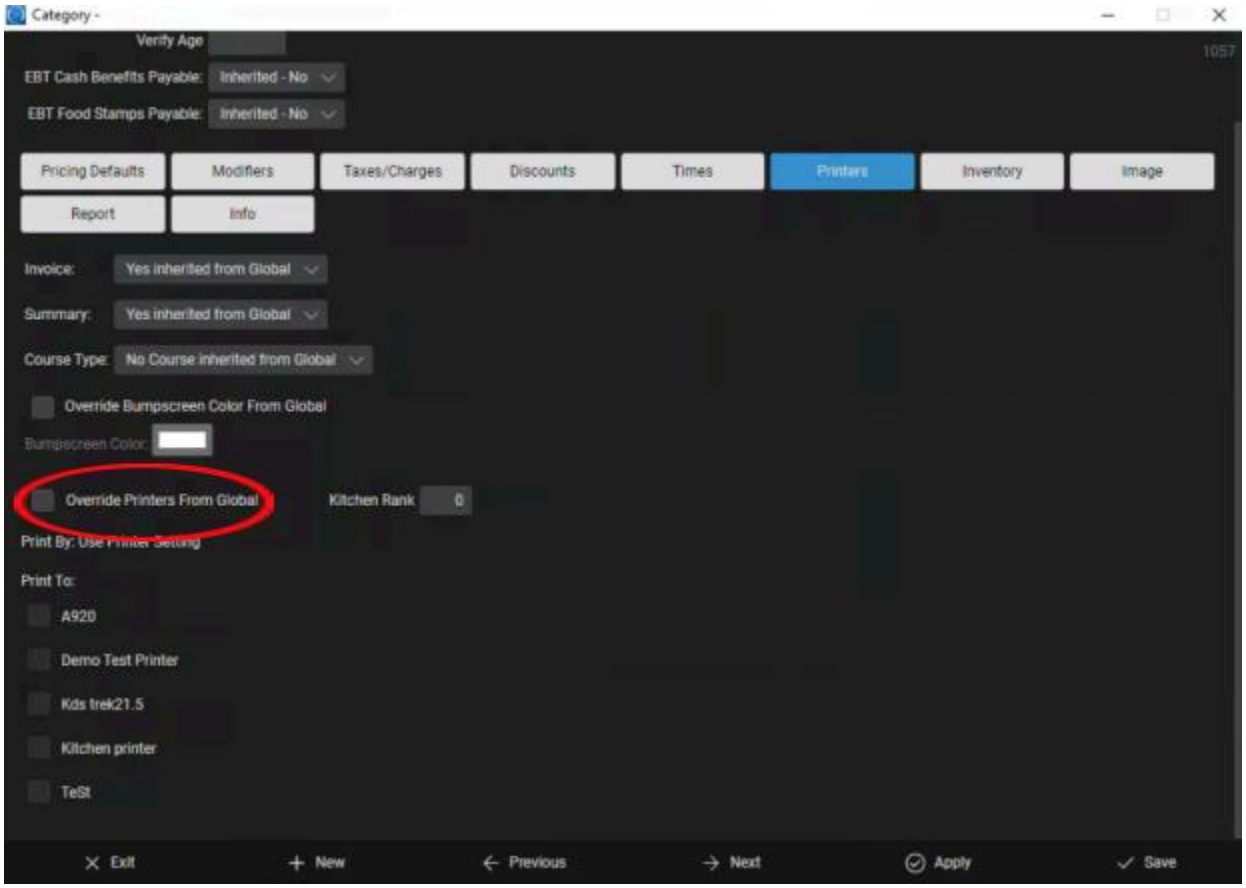

Open the item/category you would like to reroute.

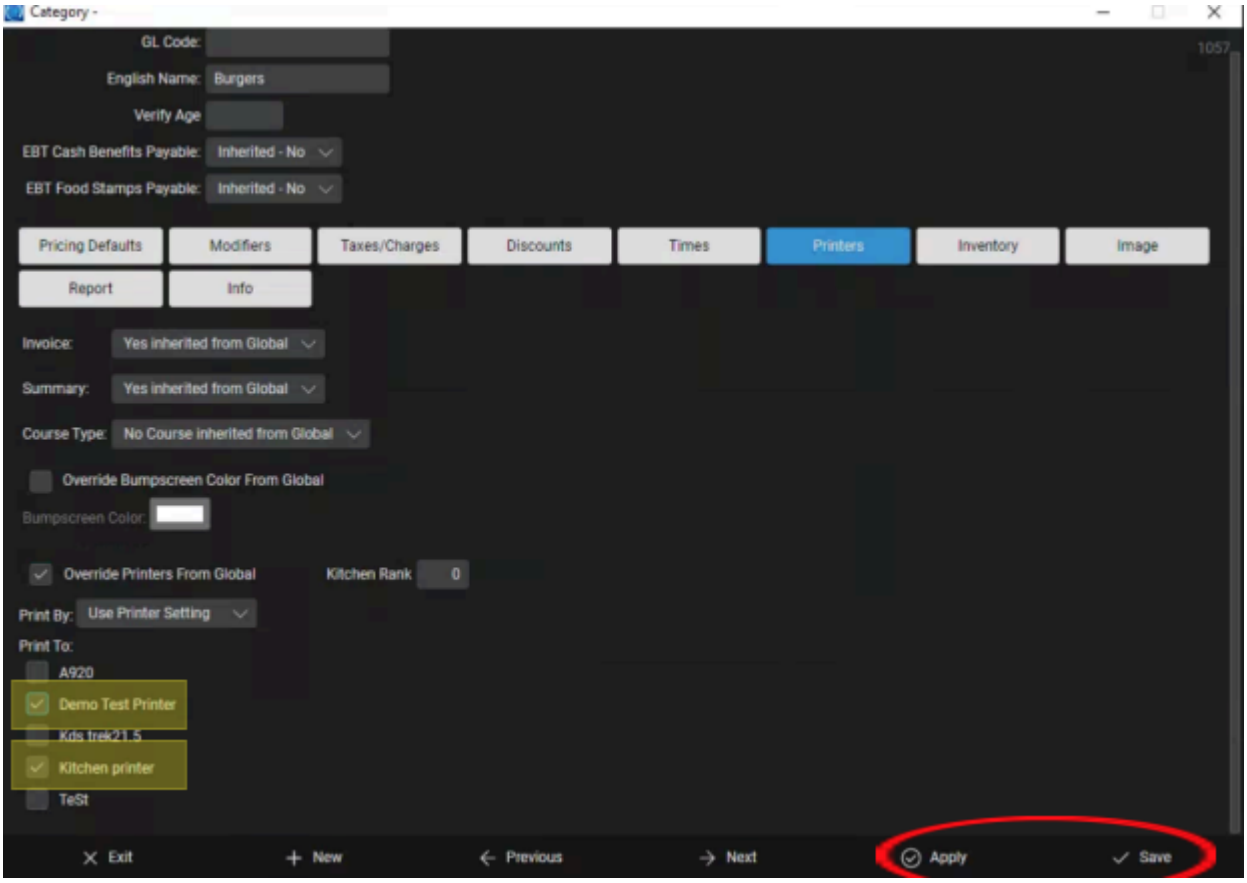

IMPORTANT NOTE: You will generally want to route at the category level rather than configure each individual item. Any specific items in a category that need to be routed differently can be overridden to do so.

Once in the item/category settings, open the “Printers” tab.

You will then see the list of printers that are set up. From here, check off the “Override Printers from Global”. This simply overrides the parent settings above it (i.e., if you set up a category to route to a printer, then go into an item in that category, it will take the category’s settings unless this is set to override.)

Check off the printers you would like this category / item to print at, and then Apply / Save.

Run a test order to ensure these settings are working as intended, and make configurations as necessary.

Congratulations!

You can now route items & categories to various printers!
